Republican College of Informatics Republic of Moldova

TECHNICAL EXPERIENCE

Recruit Me (web application) April - May 2020
Team Member – BCIT Industry Project Vancouver, BC

An online platform with ability to recruit, administer, and retain quality laborers. The application can handle entire process from laborer application to confirmation of completed work specializing in the construction industry.

- Defined tasks scope and managed the project using Kanban board in GitHub.
- Created initial wireframes with taking into consideration the main requirements and features.
- Established backend API using .Net Core with Identity framework for authorization and authentication.
- Architected frontend and created reusable components using React framework.
- Optimized app components and improved the product performance using lifecycle methods.

Stock trading (mobile application) March – Apr. 2020
Team Member - BCIT Internal Mobile Project Vancouver, BC

Designed and developed a mobile mock trading app that allows users to "Buy" and "Sell" stocks and track the progress of their "portfolio" over time. The purpose of this app is to let people practice investing in the stock market without real money.

- Implemented cloud-based authentication system.
- Stock data pulled using JSON based API from finnhub.io

Book Exchange (web application) Jan. – March 2020
BCIT Internal Individual Project Vancouver, BC

Designed and deployed a fully functional React *application that allows users to share the books.*

- Implemented an ASP.NET Core Web API backend and ReactJS frontend to create functional and easy-to-use application.
- Database: SQL Server, data pulled using proprietary JSON based API, coded in C#.

WORK EXPERIENCE
